

In North Dakota, the way that a student teacher's effectiveness is measured is by a project that covers the progress of a lesson. A pre-test is taken, the lesson is taught, and then the exact same pre-test is taken again. Below I have the copy of the test and results before and after the lesson that I taught to second graders about what a half note is.

Test

1. Circle the half note.

2. How many beats does a half note get? Write your answer here → _____

3. Draw a half note in the space below.

4. Write how many beats are in each group on the line below it.

5. Draw a total of 3 beats below - you may use any combination of half notes and quarter notes.
